

① Queue :- It follows the logic of FIFO (First In First Out) It implies that element which has been inserted first into queue will be first element to get popped out from queue.

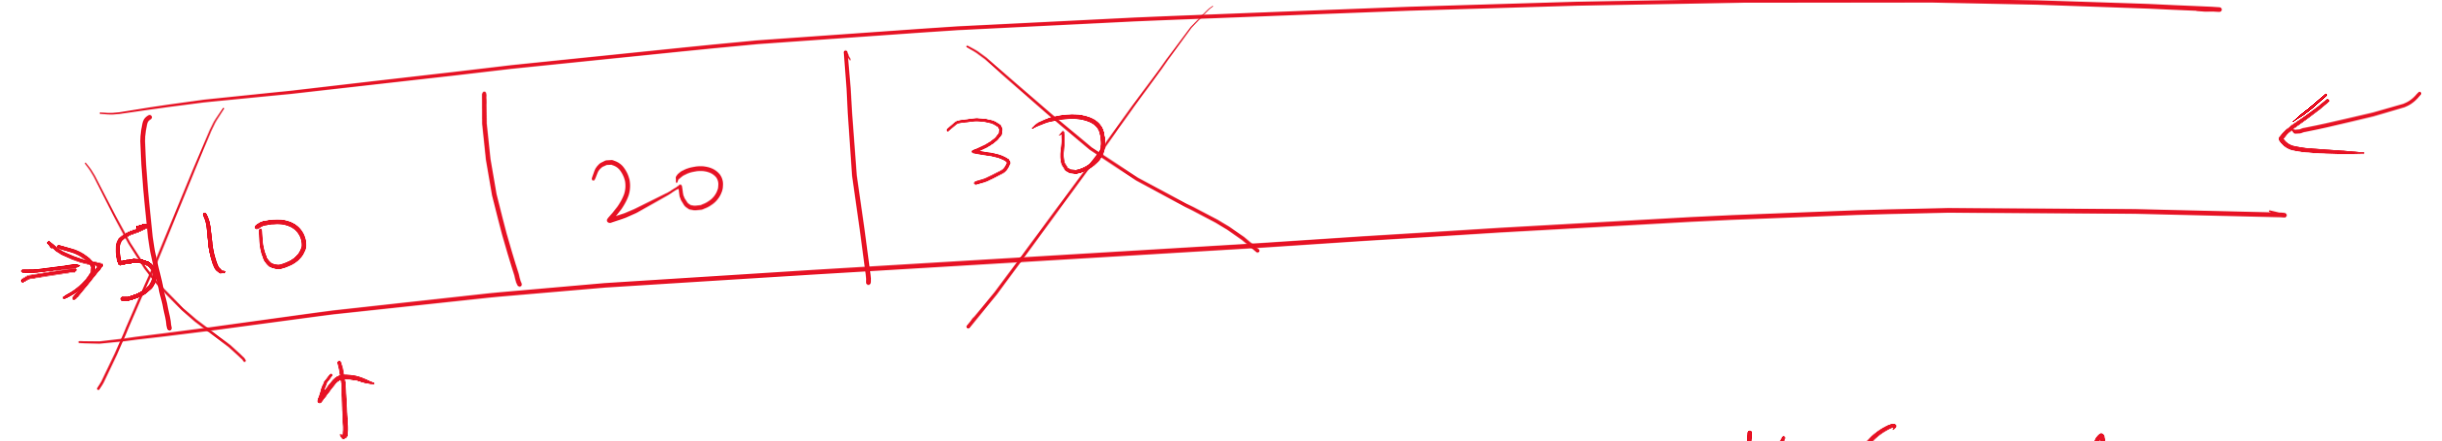

eg:- 10, 20, 30, 40, 50, 60, 70

○ Array Implementation

○ Linked List

① Doubly Ended Queue :-

① add First

① add Last

① remove Last

① remove First

① peek First

① peek Last

① $q.add(e) \rightarrow \underline{O(1)}$

② $q.poll()$, $\rightarrow O(1)$

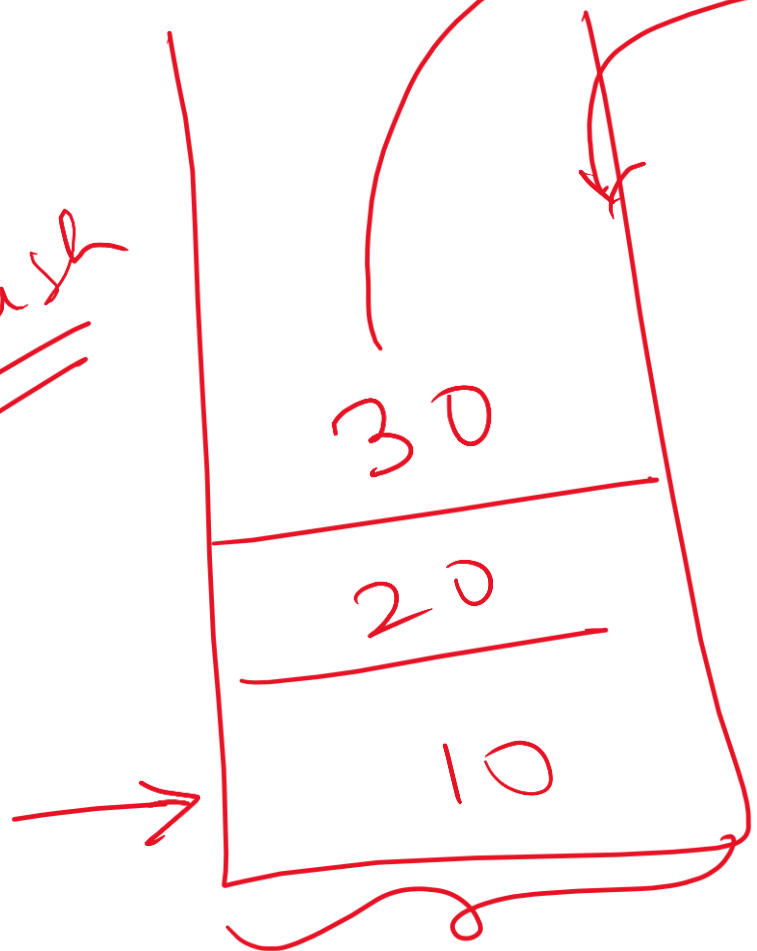

③ $peek :- q.peak() \rightarrow O(1)$

or

Front
Element

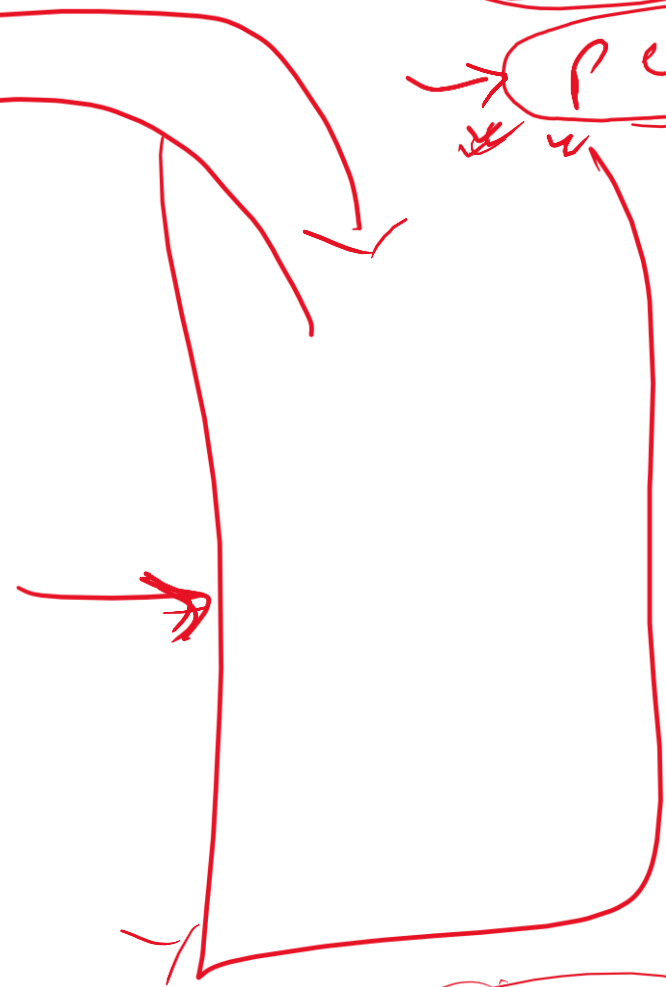

Q 10, 20, 30, 40
↓
10 | 20 | 30

push

S1

push, pop(),
peek(),
isEmpty

S2 → S2.pop();

S2.top();
